Abstract

A modern implementation of GNU social, a decentralized social network, with the Symfony framework, maintaining social's principles of extensibility and accessibility. To this end, we rely on an event system and forego traditional OOP design, opting not to use global state, but to give static access to all necessary components.

Preface

This project was developed as part of Google Summer of Code 2020, for the GNU foundation. I was mentored by Diogo Cordeiro and Alexei Sorokin, who I'd like to thank for the help they provided. They both were extremely helpful and available at a moment's notice, to answer any question, or point to some resource, if they didn't happen to know it themselves. The daily report system turned out to be more helpful than I initially though, allowing for easy time and task keeping. I'm therefore helpful that they required it. Additionally, they were never pushy or causing stress. I think they did a fenomenal job and I likely wouldn't have been able to finish the tasks otherwise.

Mentor's Page

1 Introduction

GNU social is a federated social network, with a long history, so it was fundamental for this project to maintain compatibility with it's older versions, making migrating as easy as possible, while also keeping said compatibility with other software on the Free Network.

With that in mind, a complete rewrite with a completely different framework poses some challenges, which were deemed necessary due to the age of some of the code, as well as some design decisions in previous versions that made it hard to modernize 'in place'. Therefore, we opted to use the Symfony framework, as it seemed to be the more robust and well documented option. However, the way in which Symfony expects to be used is very different from the design we had in mind; thankfully, it is never overly prescriptive and allows for a great deal of flexibility.

We opted to maintain the design philosophies of previous versions, while expanding on these where appropriate. These philosophies include the separation from the application core and modules, which are comprised of mandatory components and optional plugins, that communicate through an event system. This allows for great configurability and extensibility, as well as making dependency direction unambiguous, since the core never handles any plugin. This also allows for easily swapping parts of the application, which was possible only in some cases in previous versions, as the idea of this type of separation was not introduced at the beginning of the initial development cycle, leading to some parts that are semantically plugins still being tied to the core, as is the case for parts of OStatus and caching.

Nonetheless, GNU social still has a lot of good design decisions, and seems to be the only software in the Free Network concerned with maintaining compatibility (through keeping OStatus, for instance), and accessibility, both to those with any impairment, those who can't or don't want to use JavaScript and those who can't afford a dedicated server and use shared hosting. GNU social didn't have developers for a rather long period of time, so it now needs to play catch up, to some extent, with other software, but this focus allows GNU social to differentiate itself significantly, making updating it a worthwhile project.

This report aims to walkthrough the decisions made, their reasoning, as well as provide an explanation of how it all works together.

2 Methodology

For this project we mainly considered Symfony and Laravel, as the two most widely used PHP frameworks. We considered a change of language, but due to the wide availability of PHP hosting, we decided it wouldn't be wise to do so, as we want to make running this software as easy and affordable as possible. Looking through and reading about Laravel, it seemed to be a more 'hip' choice, but this option was discarded as it seemed that the documentation was not as extensive, it was more prescriptive with the way it should be used, being seemingly less adaptable, and it seemed to suggest the use of some proprietary technologies, which is clearly not a possibility, for a GNU project. This left us with Symfony, and it didn't seem like a bad choice at all. The documentation was useful, although lacking at times, requiring reading the code, the community was sometimes helpful in answering questions, although some were ignored. That is to say that while now everything was extremely easy and smooth sailing, Symfony was a good choice for this project.

A big divergence between Symfony and GNU social, however, is the fact that Symfony expects a more object oriented approach, leading to things such as:

```
namespace App\Controller;
3 use Symfony\Bundle\FrameworkBundle\Controller\AbstractController;
4 use Symfony\Component\HttpFoundation\Response;
s use Symfony\Component\Routing\Annotation\Route;
6 use Symfony\Contracts\Translation\TranslatorInterface;
8 class Example extends AbstractController
 {
9
      /**
10
       * @Route("/", name="example")
       * Oparam TranslatorInterface $translator
       * @return Response
13
       */
14
      public function index(TranslatorInterface $translator):
15
     Response
      {
16
          $translated = $translator->trans('Example message', [],
     null, 'sk');
18
          return new Response($translated);
19
      }
20
21 }
```

From this short example, we can identify four things that wouldn't work well with our approach: the use of annotations (@Route), the use of dependency injection, the use of an object oriented interface, and the fact that a Response object must be returned. There's nothing intrinsically wrong with this, but we felt that the use of annotations would make having plugins harder and since dependency injection requires each class that wants to use a service have a constructor and keep track of them separately, a lot of duplication would happen. We, therefore, opted for the following:

```
namespace App\Controller;
use App\Core\Controller;
use function App\Core\Trans\_m;
use Symfony\Bundle\FrameworkBundle\Controller\AbstractController;
class Example extends AbstractController
{
    public function index()
    {
        return _m('Example message');
    }
}
```

As can be seen, we opt to use static global access to services, as well as separating the responsibility of defining routes and of determining the correct language to use to their own place. The reason this is important is that it makes services accessible to modules without them having to worry about their details. The name _m for the translation function was chosen to keep the same name as in previous versions, where this name was chosen in analogy to gettext's _ (underscore) function.

3 Results

This project was deemed a success by my mentors, though, as was predicted, will still require significant work to get to where previous versions were. However, v2 development is currently wrapping up, and all focus will move to v3.

This summer we managed to have a big part of a single-instance version of the software working, with the core having most of the features needed to implement the rest. This includes module loading, the event system, database table definition loading, a translation framework and many development comforts, such as static access to Symfony's components and wrappers for a more declarative rather than object oriented interface.

For a more detailed description of how the code works, checkout the file DOCUMENTATION/DEVELOPERS/ code_walkthrough.md. What follows is a brief summary of this file.

The application's entrypoint is the file public/index.php, where in the Kernel is instantiated and the application started. The framework initializes a lot of the parts, but relevant to us is the src/Core/ GNUsocial.php file, which grabs and makes available all the needed services and initializes our side of the framework. This include loading modules, registering events and initializing the static service accessors. Routing information is loaded from all files in src/Routes folder and from module's add_route event handlers, with a similar interface to that of previous versions. Table definitions are loaded from src/ Entity and all Entity subfolders of modules, by invoking the schemaDef static function, which has the same declarative interface as was used before. Translation and form definition also follows a fluent declarative approach, where, in the case of translation, it's possible to use an array-encoded tree to represent ICU message formatting.

4 Discussion and conclusion

We've set ourselves up, with this project, to more easily develop GNU social, which should grant us better performance, easier contributing and overall revitalize GNU social development. The community was very enthusiastic and supportive all along the way. I'd personally like to thank all community members who contributed with suggestions and insight, particularly ThndrBvr, who not only sponsored another project, but also gave us a lot of great suggestions.

5 Conflicts of interest

The author has a vested interest in inclusiveness and Free Software, which no doubt shaped some decisions.

     and remove controller from the class name
171 311145ff44 [ROUTES] Change name of admin and settings routes and refactor the way
      they're specified
172 3710b597be [CONTROLLER] [ROUTES] Refactor the base Controller to not reinvent the
     wheel too much and rely on Symfony's events
173 27 c8efb43b [TWIG] Add twig function to output the active tag if the current route
  matches a given one
```

```
174 db711672f2 [CORE][ROUTES] Small refactor on entrypoint and RouteLoader
175 2b36fcab03 [COMMON][SECURITY][WRAPPER] Added security service static wrapper and
     Common::getUser
176 df6ee57cf5 [DEPENDENCY] Add symfonycasts/verify-email-bundle
177 adc715c224 [TOOLS] Update generate fields script to output default values
178 6c4f39fe1c [FIX] Fix bug in DATABASE.php, since findBy can return different types
179 04e8d7efbf [MAILER][WRAPPER] Add mailer wrapper that respects the configuration
180 73c489b244 [DATABASE] Update LocalUser table to not have a numerical id, add
     is_email_verified and fix getProfile accordingly
181 959aadf55e [FORM][WRAPPER] Merge argument options, not replace
182 95d0f6e9a4 [DATABASE] Fix typo in profile table and add a constructor
183 6b06b9c9ff [DATABASE] Fix typos in user_notification_prefs
184 6ba0536fb5 [UTIL][NICKNAME] Small refactor and remove the check between user
     nickname and group_alias, as these will have different semantics
185 9b66087072 [USER][UI][AUTHENTICATION] Add registration form
186 11f1d93231 [SECURITY] Small refactor in Authenticator.php, to remove unused
     services
187 c8781dc6fd [AUTOGENERATED] Update all entity fields
_{188} 75cc043884 [I18N] Remove incomplete autogenerated translation file, to be fixed
     later
189 3ebfbabaab [LIB][Util] Update Common::setConfig to throw an exception if
     appropriate, add Formatting::{toString,toArray}
190 c14680af72 [CONTROLLER] [ADMIN] [CONFIG] Fix form to use static strings as keys and
      add labels seperately; convert input from string to appropriate type
191 d4cf641628 [SECURITY] [CONTROLLER] Remove unreachable code from the Security
     controller
192 e610a96179 [UTIL] Update Formatting::{toString,toArray} to allow spliting by
     either space or comma
193 d87cfbb8bb [DATABASE] Refactor DB.php and make findBy always return an array,
     instead of a doctrine collection
194 Oc57a8ba43 [FORM] Add Form::isRequired
195 e40b9bd537 [SELFTAGS] Add Profile::{set,get}SelfTags
196 091ea80f6d [UI][USERPANEL] Add prefilled fields, mark some as optional and handle
      self tags in the profile settings page
197 e6107a1d57 [UTIL][NICKNAME][FIX] Add self to constant
198 c550afd2d1 [DEPENDENCY] Add odolbeau/phone-number-bundle
199 547f7cffcb [CORE][UX] Save previous url to redirect back after registering
200 a50631d032 [UI][ROUTES] s%settings/profile%settings/personal_info%
201 25f0e1e883 [UI] Update settings/account to reflect the current values
202 a7b7aa208f [DATABASE] [TOOLS] Update local_user, SchemaDefDriver and bin/
     generate_entity_fields to use the phone_number type (which maps to a varchar
     35 and does validation)
203 b56485d403 [Controller] Update settings/avatar
204 d502cc477d [CORE][SECURITY][UX] Save previous url on /register and /logout
205 d2535fc854 [DATABASE] [TOOLS] Update local_user to return the proper PhoneNumber
     type
206 bdb87ef3e6 [FORM] Add Form::handle which automagically creates a form, handles a
     request, and writes the data to the given entity and update Form :: create to do
      some more magic as well
207 5c1594f4b9 [FORM] Add DataTransformer to and from array
208 O3af4a4e34 [FORMATTING] Add option to split a string to array by both a comma and
      a space
209 cO9daa8eb3 [DATABASE] Remove DATABASE::flush from Profile::setSelfTags
210 90c798ed48 [UI][CONTROLLER] Refactor UserPanel to use the new Form::handle method
      and add placeholders in the password fields
211 bce03b20f4 [DEPENDENCY] Update dependencies
212 b9088bd01e [SECURITY] Ensure ARGON2 constants are defined, or throw exception
213 41ec3be60b [MAIL] Make mailserver a required service
214 b523906112 [UI][CONTROLLER] Work on tabbed notification settings panel
215 ac70dc8f58 [UTIL] Add Common::array_remove_keys
216 8939f9e495 [UTIL][FORM] Add form transformer array <--> string
217 3b48419417 [MODULE] Renamed modules to components
218 271676fb4e [COMPOSER][MODULE] Add autoloading rules for components and plugins
```

```
11
```

```
219 43b55fd3bc [COMMAND] Fix ListEvents command to properly display the callable
220 513d9c9f29 [MODULE] Added module base class
221 ea987a419e [MODULE][COMPILER] Add compiler pass responsible for loading,
     instantiating and wiring enabled modules
222 cc78bf5414 [PLUGIN] Update example plugin
223 53c612f927 [EVENT] Fix event handler and rename events to snake_case
224 4a1804930b [FRAMEWORK] Avoid double initializing the framework
225 258cfaf4cb [EVENT][ROUTES] Add event to allow modules to add routes, 'add_route'
226 9b318fdd6c [FORMATTING] Update license header in SchemaDef compiler pass
227 32771f638d [CONFIG] Cleanup services.yaml config file
_{\rm 228} 8cd0b80a09 [UTIL] Fix and rename arrayRemoveKeys
229 aca7e031dd [MODULE] Reload modules if modified, except in production environment
230 ae54b905f7 [CONTROLLER][UI] Add notification settings form
231 87e393eb24 [COMPONENT] [PLUGIN] Small refactor and add license
232 40ad4b20bb [AUTOGENERATED] Update autogenerated code
233 c75dd52735 [COMPONENT] Remove 'post on status change' option for email transport
234 fcd84af320 [COMPONENT][PLUGIN] Move Email and XMPP notification handlers from
     components to plugins, so they can be disabled
235 b4b8488d33 [PLUGIN] Remove Test plugin
236 c3e64332ac [UI][SETTINGS] User notification settings with configurable transports
      (through plugins)
237 d318de556d [DB][FILE][AVATAR] Handle deleting files, change file and avatar
     tables
238 1a197bdfbb [DB] Add entity base class to allow sharing methods such as 'create'
239 14f9c75e6a [MEDIA][AVATAR] Handle avatar validation and storage
240 39bdc6329c [JS] Whitespace cleanup
241 741d705967 [DEPENDENCIES] Update dependencies
242 ffcc1eee91 [AUTOGENERATED] Update autogenerated code
243 39a28a42f4 [AVATAR] Handle avatar upload without js and save and validate
     uploaded files
244 b50acb1903 [AVATAR] Fixed avatar upload, added avatar inline download and updated
      template and base controller
245 87bc913601 [TOOLS] Update generate_entity_fields
246 a3f358e77a [AUTOGENERATED] Update autogenerated code
247 d1e9b02345 [AVATAR] Update way avatar is sent, to use proper symfony responses,
     make config('site', 's_static_delivery') into a boolean
248 41d5538498 [SECURITY] Refactor
249 07b6b2cd85 [MEDIA][EXCEPTIONS] Fix errors and deprecations
250 1c24acf532 [EXCEPTION] Add ServerException and inherit previous throwable
251 b263fc3d11 [ROUTES] Add redirect from root to main/all, link from header to root,
      and change parameter order on RouteLoader::connect
252 8e81ff5530 [LocalUser] Fix missing extend
253 ef5fa9a7f5 [CORE] Data Representation and Modelling refactor
254 bfda94d26c [CORE][DB] Fix uses of db tables after previous restructure
255 e0986dfbdc [TOOLS] Fix bin/generate_entity_fields
256 e743e90a2a [AUTOGENERATED] Update autogenerated code
257 5a596bdf79 [DEPENDENCY] Update dependencies
258 10e21f4fbb [COMMAND] Fix 'bin/console doctrine:database:create' by only loading
     defaults if we have a connection
259 f3d7d4b90b [SECURITY] Wrap getUser in a try catch, in case the user doesn't exist
260 451a1f097a [UTIL][Common] Implement 'isSystemPath'
261 2b0ee10a23 [STREAM][NetworkPublic] Add skeleton of public timeline and posting
202 d71a35af53 [CONTROLLER] [AdminPanel] Add missing use statement
263 f051452e0c [UTIL][Common] Fix import
204 59b9b3cae4 [MEDIA] Move avatar fetching and adding to ouput to media component
265 43f33fa5a9 [MODULE] [Posting] Add Posting module, which handles notice posting
266 b6b11fea4d [Media] Move code from media.php to utils.php
267 e8690bf30b [DB] Add 'dql' method to wrap 'createQuery' and replace 'Gsactor' with
      'GSActor'
268 4c7becc08b [Media] Use utils
269 278b60f88b [UserPanel] Fix upload of avatar
270 7074ca7b77 [DB][DEFAULTS] Add avatar/default
271 63a56c80d0 [DB][AVATAR] Remove extraneous slash
```

```
1658e10606 [DB][File] Remove timestamp, add actor_id
273 c930c97207 [MODULE][Left][UI][TAGS] Add Left module which handles fetching tags
     and followers, fix self tags
274 1970a48015 [ENTITY] Add Entity base class to all entities
275 fa813be9bc [UI][LEFT] Add link to settings on avatar and personal info
276 a093cf0ac9 [UI][CACHE][DB] Add follow counts to left panel, caching the results;
     change follow table
277 e8db19f032 [DB][FOLLOW] Change Follow table
278 26248bba6b [WRAPPER][HTTPClient] Static wrapper around Symfony's HTTP Client
279 1ac8668bb3 [CONTROLLER] Stop propagation of kernel.controller so notices aren't
     posted 5 times. Not sure why it happens otherwise
280 191d3dd82a [UI][FAQ] Fix static pages
281 7d5159a23c [UI][LEFT] Add # before selftags, and link
282 cf6d9984fe [UI][ACCOUNT][SETTINGS] Hack to fix error related to phone number,
     until a solution is found upstream
283 8d6c9e73ee [UI][SELFTAGS] Display 'none' if the user doesn't have selftags
284 687f63e255 [SECURITY] Fix error in user registering where password wasn't hashed
285 581f3eff9e [UI][MEDIA] Add actor avatar in feed timeline
286 9e666ea5b3 [MEDIA][CACHE] Cache avatar queries and delete stale values; small
     refactoring
287 24 eafc3d56 [DEPENDENCY] Add tgalopin/html-sanitizer-bundle and transitively
     tgalopin/html-sanitizer
288 cOef6a0911 [UI][NOTE] Post and see attachments
289 4ec4888a71 [MEDIA] Only try to get an avatar if a user is logged in
290 da3dc47763 [DB][MEDIA] Small database structure changes
291 5a322f8bb8 [UI][TWIG] Small UI cleanup and change twig 'active' function to check
      for starts with, rather than equals
202 4755ff7062 [ActivityPub] Initial cleanup, removing 'die' statements, and ignoring
      the subfolders
293 48f88dcf1f [DB][MODULES][ActivityPub] Cleanup table definitions
294 b27806c211 [MODULE] Fix avatars not loading
295 f702130d69 [CACHE] Fix bug in list caching
```

6.2 Daily Reports

Improving docker container
Fixing docker environment and automatic configuration scripts
Writing a V3 installation instruction and code walkthrough document, backporting docker setup to v2
Helping students setup V3, correcting and reviewing V3 commits
Helping students setup V3, reviewing V3 commits, some refactoring work
Import commits by Diogo to add option to use self signed certificates, refactoring, rebased on nightly, changed author email
Studying Doctrine's documentation

Investigating how to use doctrine with symfony, prototyping, and helping Susanna setup her dev environment

10 Load default config values into database, small tweaks to docker and SchemaDefDriver

II Implement database config defaults loading, help Eliseu and Susanna setup their dev environments

 $\scriptstyle 12$ Updated install tools and optimized DB default loading

B Documented all config options, added alchemy/zippy

Small fixes and improving docker containers

¹⁴ Studying other software's docker configuration and codebases

- 15 Studying OpenID, OAuth and SASL protocol, for potential Single-Sign-On
- Help Susanna setup her V2 instance, updating PR to upstream 'functional-php' Help Susanna setup her V2 instance, and Eliseu understand how to implement
- templates 18 Admin configuration panel and updating code around default configuration
- 9 Add admin config form and display previous value. Studying Pleroma API
- 20 Refactoring core, use dropdown in admin config panel, add custom message extractor, contributing to upstream Functional

21	Updated configure script, helped Susanna. Added method to dump dynamic-valued
	calls to _m and dumped english files
22	Studying ICU message format to improve the implementation of the translation
	facilities, testing
23	Upgrade dependencies, fixed autoloading for _m and trying to fix the tests (the
	framework isn't loaded the same way)
	Fixed bugs in I18n _m implementation, trying to fix tests
	Meeting helping Eliseu and planning various things
26	Support for TemplateController and Symfony/Translation PR #37371, helping Eliseu,
	working on ICU format Added testing and implementation for _m and formatICU
	Add admin site config page
	Review database structure
	Finish database review, open rfc, update script and autogenerated code
	Helping Eliseu and investing a potential Doctrine bug
	Investigate Doctrine bug, fix database restructure commit, changed zero dates to
	CURRENT_TIMESTAMP, fixed Elise's rebase and last commit; researching how to
	implement queueing (symfony messenger) and investivating avatar 404 bug
33	Design discussion with Diogo, updating dependencies, adding wikimedia/composer-
	merge-plugin as a dep., fix deprecated use of class, fix routes, add
	controller base class, dummy notices
34	Implement and test queue wrapper. Investigating http caching. Configure HTTP
	cache, add cache wrapper, refactor log wrapper
	Miscellaneous fixes, add ds extension and ring buffer data structure
36	Add msgpack and redis extensions to docker image, add support for multiple cache
	pools
	Discussion with Diogo regarding next steps on the software's architecture design
38	Discussion with Diogo about ways to handle UI events. Added special support for
	redis to the cache. Fixes and refactoring
	Review enhancement tagged issues with Diogo and decide what to implement in v3
40	Fixing redis extension use 1z4 build failure, adding a redis polyfill placeholder , to allow autoloading the necessary classes if the extension isn't installed.
	Discussion with Diogo and Eliseu about the features for v3. Fix use of redis
	Trying to understand how to implement doctrine caching fixing symfony translator
41	Trying to understand how to implement doctrine caching, fixing symfony translator PR. so it's hopefully accepted, update DB wrapper so entity names are
41	PR, so it's hopefully accepted, update DB wrapper so entity names are
42	PR, so it's hopefully accepted, update DB wrapper so entity names are provided without the namespace
42	PR, so it's hopefully accepted, update DB wrapper so entity names are provided without the namespace Design meeting with Diogo
42 43	PR, so it's hopefully accepted, update DB wrapper so entity names are provided without the namespace Design meeting with Diogo Studying how to implement login with Symfony, and social's v2 implementation,
42 43 44	PR, so it's hopefully accepted, update DB wrapper so entity names are provided without the namespace Design meeting with Diogo Studying how to implement login with Symfony, and social's v2 implementation, reading about best practices about password storage Start implementing user login and supporting systems A lot of fixing and refactoring, rename user table, add login and logout
42 43 44 45	PR, so it's hopefully accepted, update DB wrapper so entity names are provided without the namespace Design meeting with Diogo Studying how to implement login with Symfony, and social's v2 implementation, reading about best practices about password storage Start implementing user login and supporting systems A lot of fixing and refactoring, rename user table, add login and logout functionality, implement password hashing
42 43 44 45	PR, so it's hopefully accepted, update DB wrapper so entity names are provided without the namespace Design meeting with Diogo Studying how to implement login with Symfony, and social's v2 implementation, reading about best practices about password storage Start implementing user login and supporting systems A lot of fixing and refactoring, rename user table, add login and logout functionality, implement password hashing Rebasing with Eliseu, helping him setup afterwards, design meeting with Eliseu

Trying to get events to work with modules. Events and most of the thing is working, can't use controllers in modules. Got controllers sorted and committed everything Fix plugins, make notification settings work, help Eliseu rebase

58 Data Representation and Modeling refactor, rebase with Eliseu, fixes

- ⁵⁹ Implement rudimentary network public feed, fixes and refactors and trying to figure out how to make a composite unique key
- 60 UI improvements; HTTP Client wrapper, fix notes getting posted 5 times; fix static pages, investigating error with phone number form, since maintainer replied
- Investigating phone number error upstream, small hack fix, small UI fixes
- 62 Uploading and seeing attachments
- 63 Rebasing, studying AP plugin, start fixing it; help Eliseu
- ⁶⁴ Fixes, helping Eliseu, reasearch adding entity loading to plugins, add note replying, start note favourite
- 65 Start implemeting favorites and recycles, researching Doctrine plugin enitites; meeting with Diogo about federation in v3
- 66 Helping Eliseu with favorites and repeats, reviewing all code, adding docs
- ⁶⁷ Implementing replies, refactoring, documentation, discussion with Diogo and Eliseu about next steps
- ⁶⁸ Further cleanup and documentation, improving replies implementation, start implementing all-encompassing activity table",
- 69 Continuing implementation of activity table, cleanup queries
- 70 Attemting to add javascript-handled replies, fixing avatar cropping script and displaying images in timelines
- 71 Fixing home timeline query, adding native query wrapper, call with Eliseu, writing documentation and technical report
- 72 Finishing up documentation and technical report. Small bug fixes
